Technical Skills
Cloud Development
Data analytics /Science
Web Fullstack Development
Mobile application Development
Database Administration
Database Development
Networking
System Development
Database Management

Languages
Java
Python
Nodejs & Javascript
React & Flutter
Android studio
PHP

Profile

I am a passionate software developer awaiting gratuation late this year, currently I am looking for an intern position. I have knowledge and interest in learning more in Full stack development, mobile development, cloud development, database management and data science. I have developed plenty of projects through learning and always being eager to try new technologies. As demonstrated by the links to my projects below. I am excited to learn more and gain more experience.`I would also like to contribute to the growth of a company.

Software Applications or Projects

Deep Sight - Azure cognitive web application

 This an azure project that uses azure cognitive services like image recognition and analysis. The web app is basically an image recognition search app for dangerous insects and animals on site.

Architectured and implemented the design for the application

Implemented the application using Restful API'S in php, Azure cognitive and DevOps deployment services and React for front end

Marion's Wear Collection - E-commerce website

The project is an ecommerce website that uses mysql database that resides in microsoft azure. It basically allows customers to browse, like, star and order clothings from Marions wear organization. The website also allows admin to add, update and delete their products from the database and also they can manage the order list procedures.

Architectured and implemented the design for the application

Implemented the application using Restful API'S in php, mysql database, Azure DevOps deployment services and HTML CSS for front end

CertificateApp - Java software sytem application

This is my java certificate generator server. Its generates certificates and sends the certificates to the requesting clients. Its my project to generate certificates for my projects that utilises SSL .

Architectured and implemented the design for the application
Implemented the application using Java for the whole system

Server-client chat app- Java secure chat server-client

This is my deepdiver chat server app. Its a secure server that runs on java. Its uses CA provided certificate to authenticate connection and to ensure secured connections. It allows for communication between deepdiveclient apps and also it stores offline messages and allows for group chats.

Architectured and implemented the design for the application

The project is developed entirely in java

Languages

MySQL & NoSql & Mongodb
Oracle Databases & Apex
DevOPs deployment
Firestore

Others

Azure & AWS & Google cloud

Soft Skills

Am a strategic thinker with the ability to make independent decisions and work with minimal supervision.

Am a good fast learner with the mindset for growth and change.

Has a good communication and rappor building skills.

I believe in team work for better quality production.

Languages Spoken

English	French
Kiswahili	

Hobbies

Codding
Travelling
Socializing
Reading

OracleDb Manager - For Express nodejs

OracleDBManager is a library that is built or developed to assit developers who are interested in developing fast projects that use oracle databases with node js access APIś. OracleDBManager have made it easier for developers to set and access oracle databases faster with just a few lines of codes.

Architectured and implemented the design for the application

Implemented the application using Node js ,oracledb and oracle autonmous database.

Candy show app - GADS Project

This is a practice project from GADS (google africa developer scholarship program) . Its an Android App called Candy show that allowed to practice the skills that we got from learning and participating in the program specifically Android development skills.

Architectured and implemented the design for the application

Implemented the application using java android studio and sqllite.

Digital Shopping Cart - E-commerce android App

This is an online digitalshoppingcart that enables users to do their phsical shopping by serving themselves as if they were shopping online. It adds an additional feature that enable users or customers to add their choosen products to shopping cart by scanning the products BARCODES.

Architectured and implemented the design for the application

Implemented the application using java android studio and mysql, nodejs , firestore.
